

## Documentation Requirements

We will follow some simple rules in this program:

- Put your name, the date, and the assignment name/number as a comment at the top of each .py file.
- State the purpose of the code in one short sentence or phrase, once again as a comment near the top of each .py file.
- Use descriptive variable names and function/method names.
- Add comments when the purpose of the code is not clear. Usually, this means a comment for each block of code in your program, but you can add more comments when necessary.
- Cite your sources. Give credit to the original source of the code if you borrow code from elsewhere. Otherwise, it is plagiarism, which is a very bad thing.
  - BU Plagiarism Policy: All work must be original and comply with the Bellevue University Plagiarism Policy. Please refer to the Student Academic Misconduct Policy (PS1035) found in the Policy page, listed under the Syllabus to learn more about BU's Plagiarism policy.

Formatting suggestions:

- Leave blank lines between main sections of your code. Think of sections of code as paragraphs in an essay. Leave a blank line between each main idea.
- Properly indent blocks of code.
